

The **victor** combines speed, knowledge, and power.

The **victor** is a unified interface that lets you manage and control your Intellex DVRs, VideoEdge NVRs, and associated IP and analog cameras. It is a platform for the future — unifying other security and business applications such as the HDVR, access control, intrusion, fire, and more.

Its unmatched flexibility lets you create customizable layouts that exactly match the tasks an operator, such as a guard, supervisor, investigator, performs each day.

Technology is Cool. Unique Implementation is Hot.

Sure, we have one of the most powerful graphics cards available. But, the big benefit is the way we use it. With **victor** the graphics card does the things the graphics card is supposed to: advanced texture mapping, fast refresh rates, and photo quality rendering of video. That frees up the CPU, and lets you deliver video faster and more efficiently, while using far less CPU cycles.

Microsoft WPF is the technology behind the cool interface. It's what allows you to control your multi-monitor setup using smart features like tear off, snap, auto hide, tab, and dock windows. Letting you create a custom layout to meet your needs and requirements rather than the fixed box that competitors offer.

victor has built-in Virtual Matrix capabilities, real-time event monitoring, and multi-monitor support enabling simple to complex command center applications.

The victor is flexible, powerful and agile, shifting when the game changes.

- Incident investigations are incredibly FAST and EASY with Smart Search because motion searches are run on a database of meta-data instead of searching through hours or weeks of videos
- Manage a Virtual Matrix using a variety of CCTV keyboards across 4 monitors — all without buying a separate VMK product
- Display video simultaneously with common feature set, no matter what the codec (H.264, ACC, MJPEG, MPEG-4); even mixing and matching technologies
- Manage events, health alerts, and alarms from IP and analog cameras, Intellex and VideoEdge NVRs
- Control and restrict what operators have access to by assigning specific roles using embedded policy management functionality
- Portable profile lets you take your credentials with you regardless of PC, no more workstation — specific registration and licensing
- Video playback is automatically time-synchronized, regardless of VideoEdge or Intellex source, ensuring that you can rapidly investigate multiple views and associated videos seamlessly
- Create and manage camera views including tours, salvos and saved views for fully customized layouts
- Support for Windows 7, Vista, and XP lets you maximize your IT investments
- Future support for HDVR expands your video recorder options

American Dynamics has been developing some of the most advanced video technologies since the early 1970s. First the unequivocal leader in digital video management systems with Intellex, then the undeniable pioneer of PTZ domes with SpeedDome, American Dynamics now proudly takes its leadership position in the evolutionary IP market.

With a philosophy firmly rooted in the notion of protecting customers' investments, American Dynamics has an unmatched approach to developing new solutions without abandoning its huge customer base.

victor is the perfect case in point. Designed to support IP and analog cameras, NVRs and DVRs, it allows customers to transition to IP at their own pace, or enjoy a mixed environment of both analog and IP.

The Complete IP Picture

With a rapidly growing portfolio of IP solutions, American Dynamics has all of the pieces for you to build a game-changing video surveillance and management solution.

- IP Cameras
- VideoEdge NVR
- Encoders
- HDVR (Hybrid Video Recorder)
- Storage Solutions

The **victor** is the ultimate teammate, unifying platforms that until today, played on separate sides.

Like thousands of other businesses worldwide, ABC Hospital has a significant investment in powerful and dependable Intellex digital video management systems.

For over ten years, they have been happy with the management, analysis and recording of video from 100's of cameras around the facility, monitoring operating rooms, loading docks, pharmacies, etc.

That story's about to change. The hospital has just been awarded a significant grant which will allow them to expand their facility and develop a state-of-the-art research wing. The time is right for the hospital to add NVRs and IP megapixel cameras.

But, again like other businesses, this hospital can't afford to simply rip out their existing video equipment, or invest in a second team of personnel to run a separate system.

As the hospital begins the construction, they add VideoEdge NVRs to their security network and victor to the new security operation center (SOC) to view, manage, and control the new IP cameras they are having installed in the new wing as well as their existing Intellex and CCTV cameras.

As part of the expansion, they also add a new staff parking lot, which they will monitor using mega-pixel cameras.

All from one control room.

All from one interface.

The **victor** makes it happen.

INTELLEX

DIGITAL VIDEO RECORDERS:

One of the most trusted, intuitive digital video management systems in the industry

- Use any Intellex platform (Ultra, DVMS, LT, IP) version 3.2 to 4.3 and beyond
- Detect alarms and events, record video, and much more
- React faster to potential emergencies with immediate email notification of system events and alarms
- Respond to events with alarm-triggered PTZ positioning
- Record higher frame rates per second for certain cameras and assign the remainder to less critical cameras

HDVR:

Analog and IP now operating in harmony

- The ideal solution for smaller applications looking to manage a mixed environment
- Directly connect analog and IP cameras into one recorder
- Two flexible configurations available: 16 analog/8 IP cameras; 32 analog/8 IP cameras
- victor integration in development

VIDEOEDGE

NEW VIDEOEDGE NETWORK VIDEO RECORDER:

The newest version (v4.0) brings network video management to a new level

- Dual streaming enables two video streams to be used from the same cameras with different ips, resolution, and codecs for live, recorded, or alarm settings
- Server side motion detection for lightning fast ad hoc post-event searches
- Streaming video playback enables Tivo-like control of video for fast-forward, pause, rewind, frame by frame control to investigate incidents or monitor video

- Listen to synchronized audio/video either live or recorded
- WAN support using networking industry standard ports and protocols making it easier to follow IT policies
- H.264 provides superior video storage and LAN bandwidth management
- Up to 10 TB of high-performance Tier 2 near-line SAS onboard storage
